

# New Workshop

---

Technology and Software in  
the Adult Ed Classroom

Professional Development

To arrange for workshop dates and times, contact  
Claudia Bianca at [cbiancanv@gmail.com](mailto:cbiancanv@gmail.com)

Julie York has been working for the Department of Adult Education in CCSD as an HSE & NVHPE Prep teacher for 5 years. She is currently re-designing their computer literacy and business computer applications high school classes. She has a BA in English Education, minoring in Business Software, and an MFA in Media Design. She is considered an expert in software and technology use by both teachers and authors and has taught at workshops, done conference presentations, and hosted webinars. Along with being a teacher, she is also an Indie author (self-published-small press), magazine editor, graphic designer, and web designer. These side jobs require staying current in online software development, changes to software platforms, and keeping up with technological advances.

So many choices—how do I pick which one to use? How do I use them? How do my students use them? Can they be used on more than just a computer? Which ones work best? Does my school need to pay for good software? How do I use what I have in my classroom?

## Are you inundated with choices

in technology and software –which ones to pick that work best, how to use them? Are you using the devices that you have available to you in your classroom to their full potential?

Here is a Professional Development opportunity that will provide you with hands-on instruction on how to use and understand the technology and software that you currently have access to!

Each workshop will be customized to your school's needs, internet capability, and devices: laptops, smartphones, iPads, Smartboards (or other brands), etc.

The focus of these workshops is not to train teachers how to use technology as a "teacher", but for teachers to learn how their students can and should be using the software and technology available to them, and how to guide them by putting teachers in the learner's seat. Ms. York will provide hands-on, walk-you-through-it instruction.
